Meerut, Uttar Pradesh

Profile summary

Final-year BCA student and Backend Developer specializing in Java and Spring Boot. Experienced in building secure, well-structured REST APIs with a strong focus on clean architecture, DTO-based data transfer, and stateless authentication. Proven ability to debug complex logical and database errors to deliver stable applications.

Education

Bachelor of Computer Applications (BCA)

[IIMT University Meerut,Uttar Pradesh] | 2023 – 2026

Senior Secondary (Class XII), CBSE

Kendriya Vidyalaya, Sikh Lines, [Meerut,Uttar Pradesh] | 2023

Secondary (Class X), CBSE

Kendriya Vidyalaya, Sikh Lines, [Meerut,Uttar Pradesh] | 2021

Technical Skills

- **Languages:** Java (Core, OOPs, Exception Handling, Collection Framework), SQL
- **Frameworks & Technologies:** Spring Boot 3, Spring Security 6, Spring Data JPA, Hibernate ORM
- **Architecture & Testing:** REST APIs, Data Transfer Objects (DTO).
- **Tools:** Postman, Git, GitHub, IntelliJ IDEA

Certifications & Achievements

- **Programming in Java – Elite + Silver Certificate** Issued by NPTEL (Funded by MHRD, Govt. of India)
- NPTEL "Programming in Java" – Elite + Silver Certificate: **Scored 82% in the national examination funded by MHRD, Govt. of India.**
- Code Debugging & Peer Leadership: **Regularly assisted classmates during practical labs by analyzing code to identify syntax and logical flaws.**
- Full SDLC Ownership: **Independently managed the entire lifecycle of the Employee Payroll project, from database schema design to GUI implementation.**

Academic Projects

Smart Society Management System

Tech Stack: Java, Spring Boot, Spring Security, Hibernate, MySQL, Postman, AWS

- Built a complete REST API backend from scratch to manage society residents, track maintenance dues, and handle user complaints.
- Solved infinite JSON recursion crashes (`StackOverflowError`) and optimized data payloads by mapping database entities to plain Data Transfer Objects (DTOs) before sending responses.
- Secured API endpoints by implementing Spring Security 6 and stateless JSON Web Tokens (JWT), ensuring only authenticated residents can access sensitive data.
- Maintained database integrity during financial operations (paying dues) by utilizing Spring's `@Transactional` annotation to enforce automatic rollbacks if a failure occurs.

Employee Payroll System (Desktop Application)

- **Tech Stack:** Java, Swing (GUI), JDBC, MySQL
- **Description:** Designed and built a comprehensive payroll tool allowing HR managers to calculate net pay and manage employee records.
- **Key Learnings & Features:**
 - 1) **Testing & Validation:** Conducted manual testing of the application to ensure salary calculations were completely accurate and implemented error handling to prevent incorrect data entries.
 - 2) **GUI Data Rendering:** Transitioned from console-based outputs to a full GUI experience, using `while(rs.next())` loops to fetch live database records and populate them into a `JTextArea` for real-time viewing.
 - 3) **Full CRUD Implementation:** Enabled users to Create, Read, Update, and Delete employee records directly through the interface, ensuring complete data management.
 - 4) **Data Processing:** Implemented logic to parse String inputs into numerical values for salary calculations, handling errors gracefully with try-catch blocks.
